

AirStar®

Our best-selling windsifter

The AirStar uses a unique patented Westeria system that provides the highest aerodynamic efficiency that allows a throughput of up to 400 m³/h. All of its components are easily and individually adjustable and accessed to facilitate its maintenance. The modularity of its design facilitates the adaptation of the machine to different applications, reduces transport costs and can be assembled in only one day.

About us

Westeria is a German company from Westphalia with over 60 years of experience producing innovative machinery. Since 1956, our product portfolio has largely grown to provide high-quality machines, technical expertise and excellent service to our clients. We are constantly developing new recycling machines and conveyor systems for what is perhaps the biggest challenge of the present day: make the circular economy a valuable and profitable reality all over the world.

Components

This windisfter is composed of the following parts:

AirWheel®

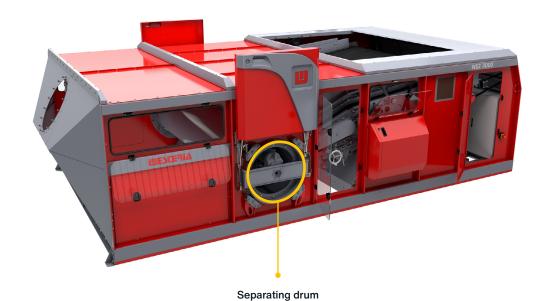

Rotary screening drum that separates the ultra-lights from the air stream in two fractions.

Separating drum

Externally integrated spring-loaded drum scraper system that prevents damp materials from baking on, getting clamped or wrapped.

Acceleration belt

Belt that feeds material to a speed of up to 3 m/s.

Key advantages

Highest performance

up to 400 m³/h.

Flexible width

1000 - 3000 mm.

Optimal blowing nozzle

with 60 % higher core radiation speed

Application examples

Technology Center

We will test the performance of your materials at our Technology Center and we give you assurance that you will achieve the same results with your application.

- · Process wood waste
- · Separate C&D waste
- · Process PET bottles to separate light plastics and label papers
- · Separate slag to benefit from these combustion residues
- · Recycle scrap materials

Options

Can be added to match your needs.

DiscSpreader®

Material distribution machine that feeds smooth flows of non-linear material inputs.

Three-way separation conveyor

The standard AirStar supports two-way separation. For a third fraction you can add our three-way separation conveyor module. Below the light fraction chamber, the conveyor belt separates the falling material again. This allows you to exploit the ballistic properties of the material even better and achieve an additional middle fraction.

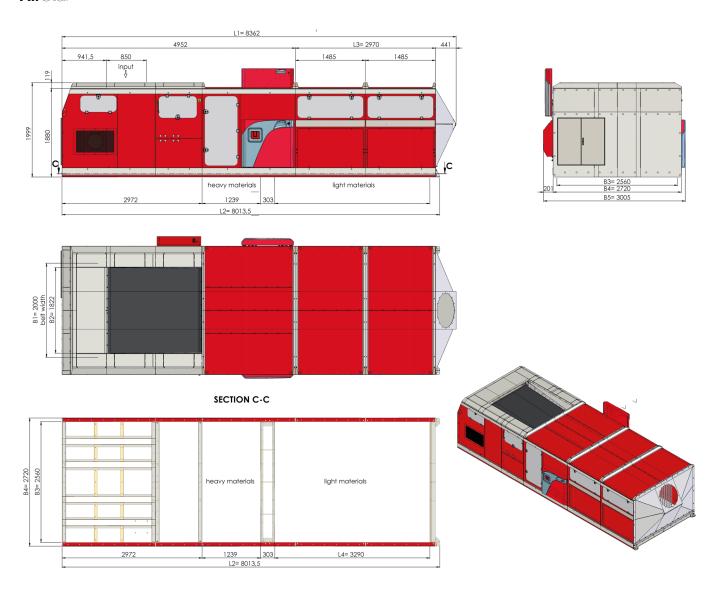

AirLift®

Vacuum windsifting machine that creates a third fraction by separating ultra-light impurities from light fraction.

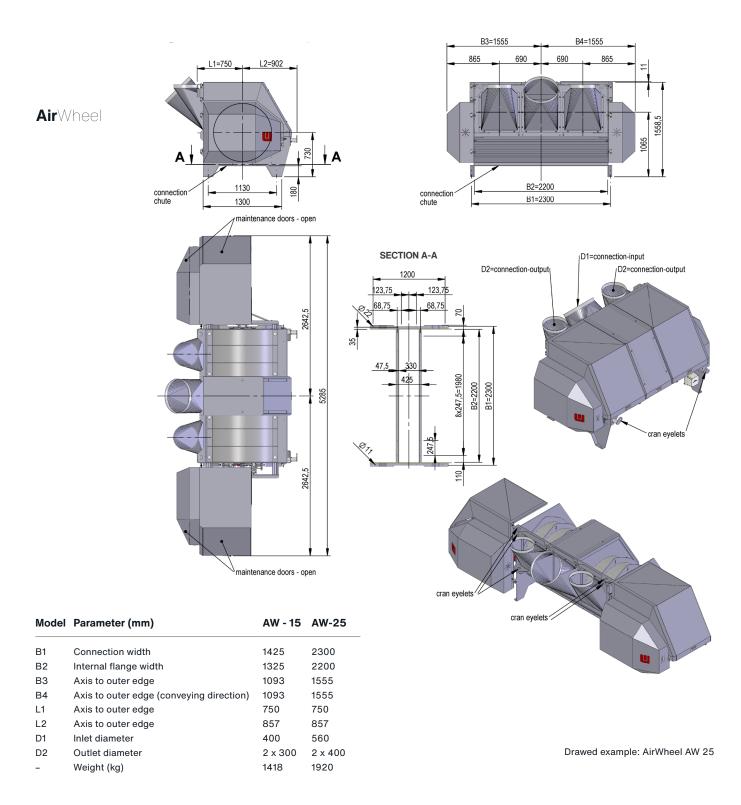

Technical information

AirStar

Drawed example: AirStar L2- 2000

Model	Parameter (mm)	L1-1000	L2-1000	L3-1000	L1-1500	L2-1500	L3-1500
L1	Length over all	6877	8362	9847	6877	8362	9847
L2	Contact length	6528,5	8013,5	9498,5	6528,5	8013,5	9498,5
L3	Length of light material chamber	1 x 1485 = 1485	2 x 1485 = 2970	3 x 1485 = 4455	1x1485=1485	2 x 1485 = 2970	3 x 1485 = 4455
L4	Length of light material chamber outfall	1805	3290	4775	1805	3290	4775
B1	Nominal width/belt width	1000	1000	1000	1500	1500	1500
