

LubricationCONTROL CENTRAL LUBRICATION FACILITY

EFFECTIVE PROTECTION AGAINST BEARING DAMAGES

Make things easier for yourself: With our **SPAЛЕCK LubricationCONTROL** central lubrication unit the bearings of your screening-machine will always be optimally lubricated. Moreover the bearings are protected against impurities from incorrect greasing by the closed system.

Lubrication CONTROL

CENTRAL LUBRICATION FACILITY

EFFECTIVE PROTECTION
AGAINST BEARING DAMAGES

ADVANTAGES & BENEFITS

- Effectively protects against bearing damage from manual lubrication carried out incorrectly or not at all
- Extends the lifetime of the bearings due to a permanent and fully automated lubrication
- Protects against the ingress of foreign objects into the bearings (risk source number 1 for bearing damages)
- Reduces the risk of bearing damages and the costs for maintenance and servicing
- Guarantees the optimum amount of grease for every type of bearing and reduces the grease consumption in comparison to a manual lubrication at the same time
- Easy to retrofit

SCOPE OF SUPPLY

- Fully automated progressive central lubrication unit
- Efficient storage tank with a capacity of 8 liters
- Electronic monitoring-unit for controlling the arrival of grease at the lubrication-points as well as for warning in the event of hose and line ruptures or in case, that there is air in the line
- Switchboard with control-unit
- Protective cabinet including heater
- Optional signal output for status display:
 - Fault
 - Refill
 - Operation
